DETAILED ACTION

Allowable Subject Matter

Claims 11-30 are allowed.

The following is an examiner's statement of reasons for allowance: US 7185719 to van Riet and US 7278496 to Leuchtenberg references are considered to represent the most relevant state of the art, wherein van Riet teach the same dynamic annular pressure controlled by diverting a portion of mud flow to the mud discharge outlet to create a backpressure for controlling the bottom hole circulation pressure based on the information obtained on bottom hole pressure near the bottomhole assembly. Leuchtenberg however teaches a different approach using a computer based control system to control backpressure in the annulus based on the mass flow balance of the injecting and returning fluids at the surface so as to maintain the bottomhole circulation pressure at a desirable level. The prior art of record, however at least fails to teach or suggest the use of a backpressure controlling device using a programmable pressure monitoring and controlling system to receive the downhole pressure information and to predict the downhole pressure using a model, comparing the predicted value with the measured information to determine a desirable back pressure level for further downhole pressure control.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
